Part III DETAILED ACTION

1. This action is responsive to communications: amendment filed on January 7, 2002 to the application, filed on 3/7/97, which is a continuation of 08/330,573, filed on 10/28/94; IDS filed on February 20, 2002

2. In the amendment claims 63-83 are canceled, and claims 84-103 are added.

Accordingly, claims 63-83 are pending in this case. Claims 84, 94 and are independent claims.

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. § 119, which papers have been placed of record in the file.

Drawings

4. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

5.

Specification

Art Unit: 2176

 Examiner requests that Applicant review the application carefully for informalities including typographical errors and awkward languages that may resulted from translation.

Claim Rejections - 35 USC § 112

7. Claims 84-103 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per independent claims 84-103, the claimed term "without a further special key depression" is indefinite, since it is unclear exactly what constitutes "a special key". In other words, it is not clear which keys are considered to be the "special" keys and which keys are not considered to be special.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 9. Claims 84-89, 93-99 and 103 are rejected under 35 U.S.C. 102(b) as being anticipated by O'Dell, U.S. Pat. No. 5,109,352, 4/92.

Art Unit: 2176

As per Claims 84-89, 93-99 and 103, O'Dell discloses the claimed invention of: entering and storing a plurality of lines of text and original words in a dictionary and replacing the entered lines of text with the unique line of text or the original word without using a special function key; identifying a plurality of lines of text with the same step, and determining the word; random access storing the plural lines of text and the unique line of text. Referring to O'Dell, O'Dell teaches a word processor to enter a plurality of lines of text (FIG.10). O'Dell stores the plurality of characters in a Chinese or Japanese (or European) character dictionary, and allows the user to enter the stokes (item 50 in FIG.10). FIG.5 shows the plurality of lines of words with the same initial stems, giving the user the visual feedback of the strokes entered for the character input.

Claim Rejections - 35 USC § 103

- 10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103° and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Ę

Art Unit: 2176

Claims 90-92 and 100-103 are rejected under 35 U.S.C. 103(a) as being unpatentable over O'Dell in view of Shimizu et al., U.S. Pat. No. 5,870,492, 2/99 (filed 6/92).

Claims 90-92 and 100-103 recite substantially similar limitations as claims 63-68, 72, 73-78, 82 and are similarly rejected. However, O'Dell does not explicitly teach the use of handwritten input. O'Dell uses the keyboard to represent the strokes for the characters (FIG.1E). Nevertheless, the use of hand writing input (e.g., using a stylus, tablet, pen) was extremely well known in the computer art at the time of the invention. With respect to the missing limitation, Shimizu teaches the following pertinent features. Like O'Dell, Shimizu teaches inputting the Chinese or Japanese characters for text processing. Shimizu explicitly points out that in inputting the Japanese characters, it is difficult to input by hand and write the characters that are similar in shapes (col.1, lines 20-30). Shimizu then teaches the solution where the candidate characters are displayed as the user inputs the strokes by hand writing (col.2, lines 1-15). Furthermore, Shimizu allows the user to select the desired character without having to use the "special character (col.2, lines 15-25). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to have envisage using O'Dell's system to take handwritten inputs of Shimizu, in order to accommodate the widely used pen-based computing systems to effectively enter the foreign language characters with similar shapes.

Art Unit: 2176

Response to Arguments

12. Applicant's arguments filed January 7, 2001 have been fully considered but they are not persuasive.

On pages 10-13 of the amendment, Applicant then gives examples of the situations where the prior art of O'Dell, USPAT 5,109,352 differs from the Applicant's invention. On page 10, in the middle of the page, Applicant asserts that the prior art technique is "incomplete and illogical." However, Applicant must be reminded that the prior art reference only needs to show the features that are claimed. It should be further reminded that Applicant is using the open-ended language in the claims (i.e., "comprising"). In other words, Applicant is claiming that the invention contains at least the claimed features and possibly more. Therefore, the prior art reference applied to reject the claims under 35 USC 102 needs only to show at least the claimed features. The fact that the prior art reference may contain features that are different from the Applicant's invention (but not claimed) has no bearing in the rejection. Therefore, in response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., the example on pages 10-13) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). The prior art of O'Dell (USPAT 5,109,352) at least teaches the embodiment where the characters are

Art Unit: 2176

displayed as the user inputs them. Therefore, it is suggested that Applicant amend the claimed language to include features that are not taught by the prior art.

On pages 13-14, Applicant points out that O'Dell does not use the "handwritten" input method for entering the text. In response, the present Office Action incorporates the prior art of Shimizu et al, which teaches the combination of handwritten input and the character "candidate" selection features. Accordingly, the arguments are moot in view of the new ground of rejection.

Conclusion

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steve Hong whose telephone number is (703) 308-5465. The examiner can normally be reached on Monday-Friday from 8:00 AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Herndon, can be reached on (703) 308-5186.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, D.C. 20231

or faxed to:

(703) 308-9051, (for formal communications intended for entry)

Or:

(703) 305-9724 (for informal or draft communications, please label "PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA., Sixth Floor (Receptionist).
